

Module 1: Orientation & Quick Start

This module is designed to fast-track your entry into high-volume, vetted field work. You already possess 60% of the required skills; this module teaches you the remaining 40%—specifically how to document facts for lenders without crossing legal or professional boundaries.

1. Learning Objectives per Audience Segment

- **Existing Field Inspectors:** Standardize your reporting to meet the "Base Standard PCR" required by top-tier firms to ensure consistent, high-volume assignments and on-time payments.
 - **Notaries:** Learn to translate your "verify and witness" expertise from documents to physical property assets and occupancy status.
 - **Realtors:** Master non-invasive reporting and lender-specific terminology to provide collateral verification without fiduciary conflict.
 - **Gig Workers:** Transition from simple delivery to professional documentation using specialized mobile apps like InspectorADE to earn \$50–\$150 per 15–45 minute job.
-

2. Why This Matters (The Income Focus)

- **Existing Inspectors:** Access to elite firm networks like Nested Objects requires a "zero-defect" documentation standard. This module eliminates the "re-inspections" that kill your profit margins.
 - **Notaries:** Field inspection is "notary work for properties." It utilizes your existing travel and verification habits but applies them to a \$50–\$150 per-visit model rather than a per-signature fee.
 - **Realtors:** You know the market. This role allows you to use that knowledge to serve a different client—the lender—filling the income gaps between closings with stable, recurring default and REO work.
 - **Gig Workers:** Stop trading your gas and time for \$5–\$10 deliveries. This training moves you into professional services where you can earn \$15–\$30+ per hour by routing multiple 10-minute stops.
-

3. Common Mistakes to Avoid

- **Existing Inspectors (The Subjectivity Trap):** Using language like "property is in terrible condition" instead of the objective "multiple missing shingles observed".

- **Notaries (The "Hamburger without Meat" Mistake):** Reporting occupancy as "unknown." Lenders pay for a definitive determination based on visual cues, not a guess or a "no answer".
 - **Realtors (The Professional Conclusion):** Offering a diagnosis or repair recommendation. You must never tell a homeowner the roof "needs replacement"—you only document the ceiling stain.
 - **Gig Workers (The Drive-By Habit):** Submitting photos with "car parts" (dashboards, mirrors) visible. Lenders reject these immediately as they prove you didn't exit the vehicle to conduct a full visual survey.
-

4. Success Metrics: How You Know You're Ready

1. **Technical Readiness:** You have installed and synced the InspectorADE or Focus app, disabled orientation lock, and verified your GPS and timestamp metadata are active.
 2. **Objective Fluency:** You can describe a belligerent occupant or a damaged foundation using strictly factual, non-emotional prose.
 3. **The 6-Angle Sequence:** You can execute the mandatory exterior photo sequence (Street Sign, Address, Front, Front Left, Front Right, Street Views) in landscape mode without a single car part or finger in the frame.
 4. **Occupancy Hierarchy:** You can correctly identify a "vacant" property even if it is full of furniture, based on the presence or absence of "signs of life".
-

5. Timeline to Profit

- **Time to Complete Module:** 2–4 hours (includes software setup and equipment gathering).
 - **Time to First Paid Job:** Typically 3–7 days following background check (ABC#) clearance and vendor onboarding.
 - **First Paycheck:** Payments are generally processed every other Friday via direct deposit.
-

6. CRITICAL SCOPE: Field Inspector vs. Home Inspector

You must maintain a "bright line" distinction between these two roles to protect yourself and the lender.

Feature	Field Inspector (You)	Home Inspector (Not You)
---------	-----------------------	--------------------------

Duration	15–45 Minutes	2–4 Hours
Purpose	Fact-based documentation for lenders	Diagnostic evaluation for buyers
Method	Non-invasive, visual only	Invasive (testing HVAC, electrical, etc.)
Action	OBSERVE and DOCUMENT	DIAGNOSE and RECOMMEND
Constraint	Never give repair advice or value assessments	Provides repair estimates and structural opinions
Authority	No licenses/degrees typically required	Requires state licensing and specialized training

The Golden Rule: You are the "eyes and ears" for the lender. If you see a hole in the roof, take a photo. Do not climb on the roof, do not guess why the hole is there, and do not tell the neighbor it will cost \$10,000 to fix.
