

VOICE DOCUMENTATION BEST PRACTICES

Complete technical reporting 20% faster with hands-free dictation

1. Use Structured Dictation

State the category, then the observation. Example: "Roofing. Observed missing shingles on south elevation. Tag as wear." This allows the AI to accurately map data to fields using the "Audio FastFill" mechanism.

2. Speak Naturally, Not Robotically

Modern AI interprets your "intent". Use casual instructions like "set due date for next Thursday" to automate calendar scheduling.

3. Utilize Confirmation Loops

Pay attention when the system prompts for clarification. Example: AI asks, "Did you observe missing shingles or ponding?" Use these prompts to ensure you haven't missed a required observation.

4. Enforce Objective Language

PROHIBITED: "Basement is flooded because the pipes burst." RECOMMENDED: "Visible standing water in the southwest corner of the basement."

5. Know When to Switch

USE VOICE: When navigating ladders, crawlspaces, or in cold weather while wearing gloves. USE TYPING: In high-noise construction environments or when recording highly confidential occupant information where privacy is required.

6. The Income Lift

Mastering hands-free documentation can add 2-3 additional jobs to your daily route, potentially generating \$100-150 in extra daily revenue.

OBJECTIVE LANGUAGE EXAMPLES

Prohibited (Diagnostic)	Recommended (Objective)
"Basement is flooded because the pipes burst"	"Visible standing water in the southwest corner of the basement"
"Roof is failing and needs immediate replacement"	"Observed roof wear with missing shingles and minor ponding at rear"
"Foundation damage requires structural repair"	"Foundation crack on west side measuring 18 inches × 1/4 inch"
