

AI LIMITATION & VERIFICATION PROTOCOL

Protect your professional liability with the "Human-in-the-Loop" mandate

THE "AI CANNOT" BARRIER

Field inspectors **OBSERVE and DOCUMENT** facts only. AI is your assistant, not your replacement.

AI CANNOT:	Why This Matters
FEEL moisture behind a wall or soft spots in wood	Sensory perception requires physical touch that AI lacks
SMELL hidden mold blooms or gas leaks	Olfactory detection is critical for safety hazards AI cannot sense
SENSE subtle shifts in structural integrity or springy floors	Contextual interpretation of physical stability requires human judgment
MAKE legal determinations regarding title or safety certifications	Professional liability and licensing requirements cannot be delegated to AI
EXPAND your professional scope to diagnose or recommend repairs	Scope violations expose you to lawsuits and loss of certification

REQUIRED HUMAN VERIFICATION PROTOCOL

Step	Verification Action	Why It's Critical
1	Factual Accuracy Review: Scan every AI-refined narrative to remove "hallucinations"—plausible-sounding but false statements	AI may invent measurements, locations, or conditions that weren't actually observed
2	Scope Boundary Verification: Manually strip any diagnostic language (e.g., "failing roof") and replace with observable facts (e.g., "missing shingles")	Diagnostic opinions exceed your scope and expose you to professional liability
3	Metadata Validation: Ensure AI's geospatial data correctly matches the physical house number and street sign you observed on-site	Wrong GPS coordinates = wrong house = report rejection + unpaid work

4	Final Professional Judgment: You are the FINAL AUTHENTICATOR. Use technology for visual grounding, but your signature confirms verification of reality	Your professional liability cannot be delegated to an algorithm
---	---	---

THE FORCE MULTIPLIER FRAMEWORK

AI handles the data processing • YOU provide the judgment and ethics
Discontinue use of any AI suggestion if it contradicts your on-site observations
