

ROUTE OPTIMIZATION EFFICIENCY CALCULATOR

Maximize Your Profit: Turn windshield time into billable time

In this business, if you aren't at the property, you aren't making money. Manual route planning is the fastest way to cap your income at \$100-200/day. High-volume field inspectors use geospatial intelligence to hit \$300-500/day by **doubling their stops per hour**.

OPERATIONAL COMPARISON MATRIX

Operational Metric	Manual Planning (Google Maps/Paper)	Advanced Algorithmic Software	Business Impact
Stops Per Hour	2 to 4	6 to 8+	Doubles revenue potential per field hour
Avg. Distance Between Stops	5 to 10 miles	1 to 3 miles (Clustering)	Slashing fuel costs and vehicle wear
Rerouting Time	Manual/Interruptive	Real-time/ AI-assisted	Add "Rush" orders mid-route without chaos
Admin Time	Post-route data entry	Real-time, GPS-verified upload	No evening paperwork; 100% accurate

THE ROI CALCULATION: THE 30% EDGE

Switching to an automated routing software results in an immediate **30% return on investment**. By reducing fuel consumption and vehicle depreciation while increasing your daily capacity from 20 stops to 40+ stops, you effectively give yourself a massive raise without working more hours.

SOFTWARE COMPARISON FOR FIELD INSPECTORS

Software	Best For	Key Features	ROI / Efficiency
WorkWave (RouteManager)	Complex pick-up/drop-off challenges	Factors in rush hour, traffic patterns, load capacity	~30% ROI through efficient sequencing
Mapline (Geo Routing)	Managing large territories	Recurring schedules; optimizes trillions of data points in minutes	Unmatched flexibility for territories
FieldCamp	High-volume AI scheduling	System "learns" recurring zones; adapts to weather/cancellations	Cuts drive time by nearly 30%
