

ADVANCED DAMAGE DOCUMENTATION FRAMEWORK

Constructing a visual narrative for the lender • Context + Detail = Zero ambiguity

Lenders are hundreds of miles away. Your job is to provide **Context + Detail** to eliminate ambiguity. **Never diagnose—only document facts.**

THE NARRATIVE SEQUENCE: THE 4-SHOT METHOD

For every defect found, you must provide this specific sequence:

Shot #	Type	What to Capture	Purpose
1	Establishing Shot	Wide-angle view of the entire side of the structure	Shows location of defect relative to grade
2	Relationship Shot	Mid-range photo showing defect's proximity to environmental factors (tree, downspout)	Provides visual clue to possible cause WITHOUT diagnosing
3	Detail Shot	Close-up of the defect; use a ruler or coin for scale	Provides measurement and severity context
4	Comparison Shot	Photo of similar, unaffected area of the property	Highlights severity of deviation

CAMERA SETTINGS FOR ACCURACY

Scenario	Setting/Technique	Result
High-Contrast (Dark room, bright window)	Use HDR bracketing	Ensures both interior walls and neighborhood context are visible
Highlight Exposure	Always "expose for the highlights"	Prevents blowout around lamps or windows

MEASUREMENT TOOL SELECTION

Tool	Use Case	Best Practice
Standardized Ruler	Cracks or holes	Ensure ruler is clearly visible in frame
Coin (Quarter)	Small defects needing scale reference	Use when ruler is too large for context
GPS Metadata (InspectorADE)	All photos	Verify timestamp and GPS coordinates on every image
